信任问题 → 我做过程序员 → 兴奋与担心

忘词接这里

People may have different answers.

Thank you. Now another question: would you trust AI to do part of your job?

[停约 3 秒，不要求回答。]

People may have different answers. I used to work as a programmer, so this question feels personal. AI has already changed the way programmers work.

So AI, for some people, it is exciting. For others, it is worrying. Sometimes, it is both.

顺序 · 下屏：AI 历史

历史 → 生活 → 工作 → 担忧

忘词接这里

Today, let's look

Today, let's look at how AI is changing our lives and work.

Then we can discuss what worries us about its future.

顺序 · 下屏：清迈生活

1956 → 手机里的 AI → 2022 ChatGPT → 为什么热门

忘词接这里

Then came a big boom.

First, a little history. AI stands for artificial intelligence. It did not begin with ChatGPT or AlphaGo. Researchers were already discussing it in **nineteen fifty-six**. Later, it appeared in facial recognition on our phones and online recommendations.

Then came a big boom. The companyy OpenAI released ChatGPT-3.5 in **November twenty twenty-two**. Suddenly, more people could talk directly to AI in everyday language.

Since then, AI tools have become more capable. They can work with pictures and help finish complex tasks. So that's why AI become such a hot topic now? It is easier to use, and it can do more of the things we do every day.

> 顺序 · 下屏：工作变化
> 菜单翻译 → Lily 口语练习 → 旅行 Agent
>
> 忘词接这里
> **Language practice is another example.**

Next, let's bring this closer to our lives in Chiang Mai.

Imagine you are in a restaurant with a Thai menu. You can open the camera. Then **Google Lens** or some dictionary apps can help translate the text. Compared with looking up each word, this can save a lot of time.

新例子 | 口语练习

Language practice is another example. Duolingo offers AI conversations with a character called **Lily**. It gives learners another way to simulate a real-life

conversation. And on youtube and tiktok, there are also some videos of interesting or deep talk with ai.

新例子 | 旅行规划

And if you are preparing a trip, an assistant can help compare options and organize a plan.

Agents like ChatGPT or workbuddy have also been designed to research information and create useful documents, rather than only reply with some sentences.

顺序 · 下屏：Agent 定义

态度不同 → Klarna 客服 → 自由职业项目

忘词接这里

Take customer service as an example.

The third part, people may love ai because it helps thme finish work quikly and correctly. They can save money and time. some people may support ai, because ai might steal their privacy or replace their jobs one day in the future.

新例子 | 客服

Take customer service as an example. In **twenty twenty-five**, **Klarna**, a financial services company, reported a major change. Its AI assistant handled around **sixty percent** of its customer-service chats.

This shows that AI is already taking over some tasks.

新例子 | 自由职业

Writing and design are affected too. A study of one freelance platform found fewer job posts in some writing, coding and image-creation categories. For freelancers, fewer projects can mean less money.

顺序 · 下屏：程序员与迭代速度

记住需求 → 使用工具 → 分步完成任务

忘词接这里

In simple terms,

新概念 | Agent

Another change is the rise of agents. In simple terms, an agent can remerber who you are, what's your job need, what's your like, then use tools to control your computer, use your app and take several steps towards a goal.

顺序 · 下屏：四类担忧

Codex → 两年前 / 现在 → Google 25% / 75% → 信任

忘词接这里

What consistently amazes me

转到我的工作 | 程序员

For programmers like me, Agents like Codex can help write code, run checks and fix problems.

重点 | 变化速度

What consistently amazes me about AI is not just its power, but the speed at which it evolves. **Two years ago**, if someone had claimed to have built an application or a website using AI, most programmers would take it as a joke. **Today, however,** an increasing number of programmers

barely write any code at all, relying entirely on AI to develop software. We trust AI's work more and more.

关键数据｜指向图表，读年份与比例

And there is a survey of Google that AI generated more than a quarter of its new code in twenty twenty-four. By spring **twenty twenty-six**, it reported **three quarters**. Engineers still approved the code.

> [停约 3 秒，让听众看 Google 数据。]

I knew these figures would be high, but the results still surprised me.

That brings us back to our opening question. How much would you trust AI with your work?

顺序 · 下屏：伦理与隐私

四类担忧 → 721 篇手稿 → 若确认的重要性 → 核查 / 贡献

忘词接这里

In October twenty twenty-six,

So far, we have seen what AI can offer. Now let's look at four concerns about its development.

First, who checks the answers, and who gets the credit?

新案例 | 数学研究

In October twenty twenty-six, OpenAI released hundreds of AI-produced mathematical research achievements. Its collection now contains **seven hundred and twenty-one** manuscripts.

重点｜研究水平与条件

These address open research problems. Some proposed results would be major breakthroughs **if confirmed**. In that sense, they could go well beyond some **typical PhD projects**.

Then the debate is not only about speed. Who checks the work? Who receives credit? And can people understand what happens to human research?

This matters outside mathematics too. Someone needs to check the answers and take responsibility.

顺序 · 下屏：能源与社区

第二：假视频与同意 → 第三：邮件、文件与权限

忘词接这里

Third, what happens to our privacy?

新担忧 | 伦理

Second, how could AI be misused?

Imagine an AI-generated video of you saying something you never said. Someone shares it as real. It could damage your reputation or mislead other people.

Is it fair to use someone's face or voice without permission? Who is responsible for the harm? These are ethical questions we need to discuss.

新担忧 | 隐私

Third, what happens to our privacy?

An agent may be more helpful if it can read our emails or company files. At the same time, we are sharing private information. We need to decide what it can read and do.

顺序 · 下屏：最后一页

第四：电、水、污染 → 用电预测 → 美国本地民意 → 谁承担成本

忘词接这里

A twenty twenty-six Gallup survey

新担忧 | 环境

Finally, what is the environmental cost?

AI runs in data centres. These need electricity, and some use water for cooling. If the power comes from fossil fuels, it also creates pollution.

数据 | 用电估算与预测

The International Energy Agency expects data centre electricity use to roughly double from twenty twenty-five to twenty thirty. This includes centres used for AI and other services.

新数据｜本地民意

A twenty twenty-six Gallup survey found that about seven in ten Americans opposed AI data centres in their own area.
Concerns included electricity costs and the environment.

So AI may help one person while creating costs for someone else.
As it develops, we need to ask who benefits and who pays.

顺序 · 最后一屏

AI 已在这里 → 互联网类比 → 下一波变化 → 不论态度先了解

忘词接这里

Nowadays,

AI is already here, in our lives and in our work. It can help us do more, but it also brings difficult choices.

For me, I am excited about what we can build. I hope we use that ability to make life better for people.

转向类比 | 互联网

Nowadays, I think AI is similar to the rise of the Internet decades ago.
Back then, personal computers and the Internet became popular. **Then lots of big companies** and

apps showed up, like **QQ**, **Alipay**, **Taobao** and later **Douyin**.They have changed how we live and work.

回到今天｜AI 的下一波变化

I believe AI is the next Internet time. It will also change everyone's life and work once again.

最后主张｜不论态度，先去了解

So whatever you support AI or not, i think you should learn about it. There is an old Chinese saying.

No matter if AI is a firend or an **enemy** to you, it's always good to kown a lot early.

结束｜停留画面

Thank you.
